

# How to setup Threema Libre with Apostrophy on the MCo2

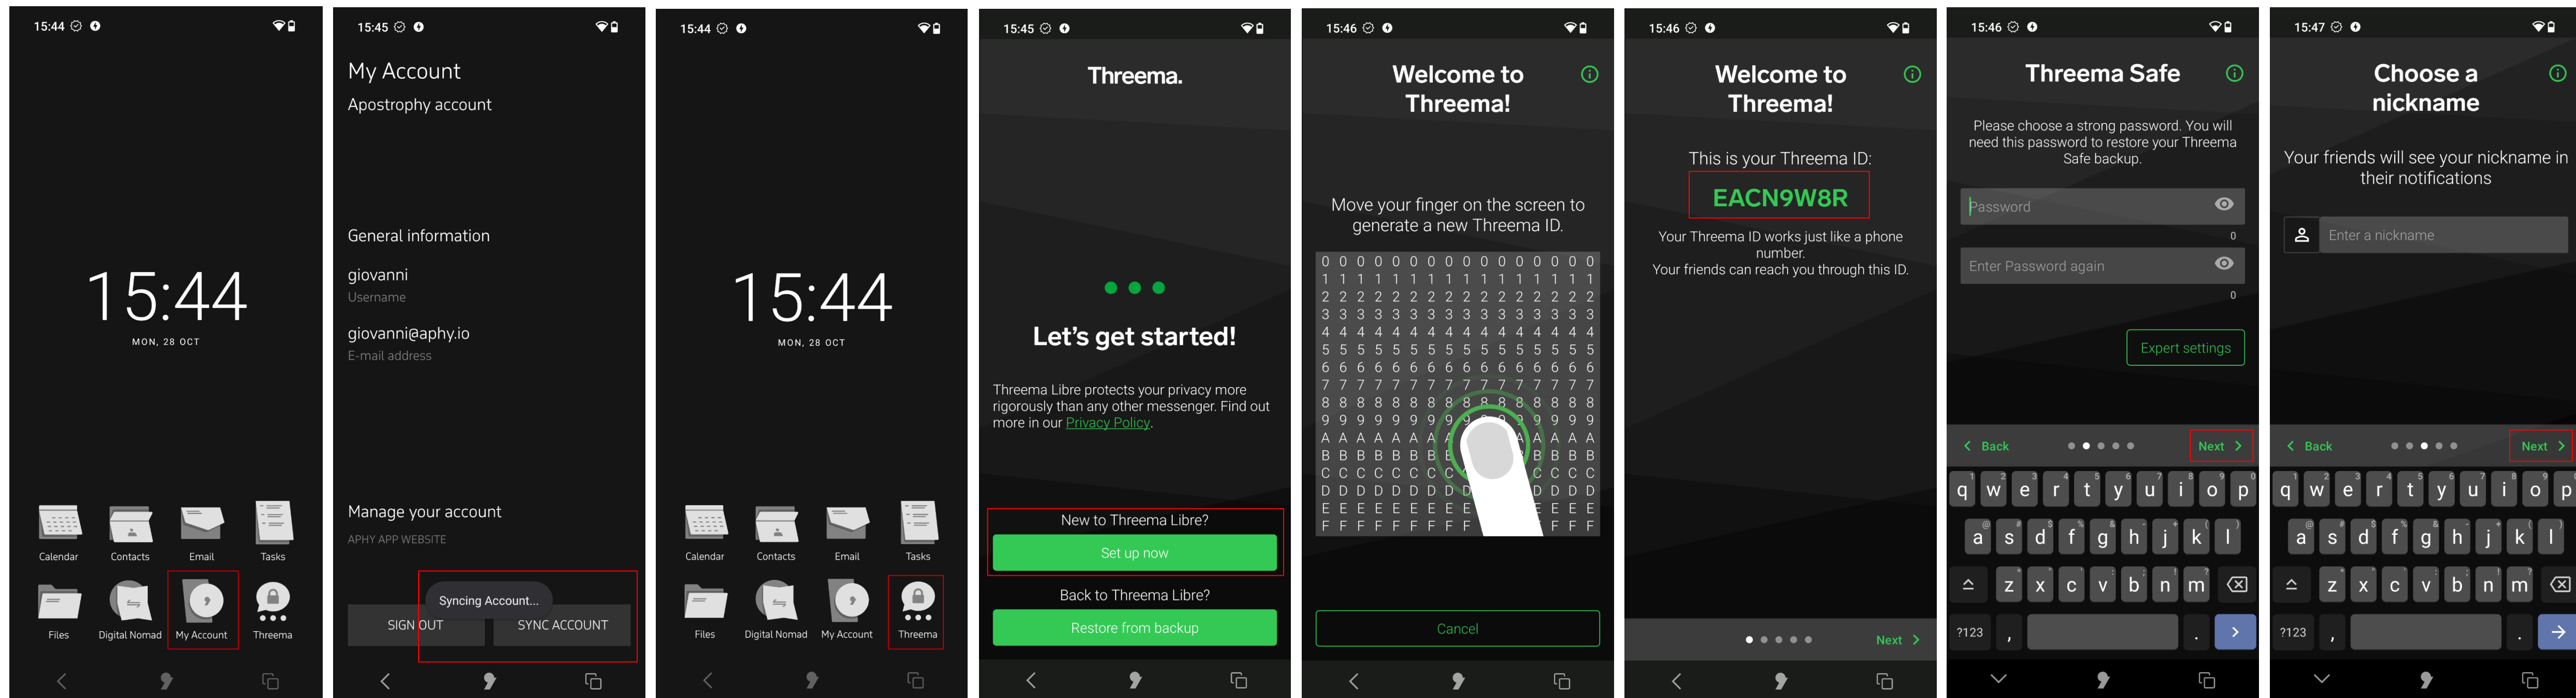

# How to setup Threema Libre with Apostrophy on the MCo2

After updating to version MCo2.20241018.U5, you'll find Threema automatically integrated into your Apostrophy system on the home screen.

**Note:** The integrated app is the **standard Threema version**, not Threema Work. If you have a Threema Work account, you need to install the Threema Work app.

1. Ensure you're logged into your Apostrophy account in the *My Account* app.
2. Once logged in, tap on **SYNC ACCOUNT**. This will automatically activate your Threema key in the app.
3. Open the Threema app, click on **SET UP NOW**, and start your account setup.

4. Move your finger on the screen to generate a new **ThreemaID**
5. Threema will assign you an 8 char alphanumeric ID. This ID is your unique address in Threema and allows you to use Threema, without having to add your email or phone number. Your friends and colleagues will be able to reach you through this ID.
6. Choose a strong password and tap on Next.
7. Enter your nickname and tap on Next.

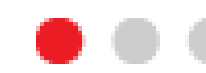

# How to setup Threema Libre with Apostrophy on the MCo2

- Threema will ask you to enter a phone number. To skip this, tap Next, however, remember that your friends or colleagues will not be able to find you via your mobile phone and you will not appear in your their contact lists.
- You will be asked to allow synchronisation of contacts to find friends using Threema. Tapping Yes will show the contacts using Threema.
- Configuration is now complete.

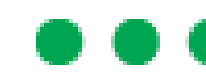

## What do the three colored dots next to a contact mean?

The dots are an indicator for a contact's verification level. They don't affect the encryption strength (it is always the same high-grade ECC-based encryption), but they are a measure for the probability that the saved public key of a contact indeed belongs to that contact.

 Level 1 (red): The ID and public key have been obtained from the server because you received a message from this contact for the first time or added the ID manually. No matching contact was found in your address book (by phone number or email), and therefore you cannot be sure that the person is who they claim to be in their messages.

 Level 2 (orange): The ID has been matched with a contact in your address book (by phone number or email). Since the server verifies phone numbers and email addresses (via an SMS or email with the activation link), you can be reasonably sure that the person is who they claim to be.

 Level 2 (blue): This verification level is only available in Threema Work and Threema OnPrem; it indicates that the Threema ID belongs to an internal company contact.

 Level 3 (green): You have personally verified the ID and public key of the person by scanning their QR code. Assuming their device has not been hijacked, you can be very sure that messages from this contact were really written by the person that they indicate.

 Level 3 (blue): This verification level is only available in Threema Work and Threema OnPrem; it indicates that the Threema ID belongs to an internal contact whose ID and public key you have verified by scanning their QR code.

For any additional questions about using Threema, please refer to Threema's support page [here](#).
